

Support Nuclear Physics Research

“Measured by its impact on society, the return on investments made by the U.S. in nuclear science research is large... If the past can be used as a guide, the isotopes, data, and technologies nuclear science will generate in the coming years will provide substantial new benefits to society...”

-DOE/NSF Nuclear Science Advisory Committee

U.S. investments in nuclear science have produced extraordinary discoveries and dramatic technical advances that have fueled the nation’s economy and produced the world’s most highly skilled, tech-savvy workforce. The reason is clear: the quest for understanding the universe and the properties of its fundamental particles and forces inspires and attracts the world’s best and brightest minds.

DOE nuclear physics funding drives technical innovation in fields far removed from the original research, including modern medical imaging, drug design, cancer treatments, cargo inspection, criminal forensics, energy production and climate modeling.

In addition to sponsoring investigator-initiated scientific inquiry, DOE Office of Science supports three major nuclear physics facilities that enable scientists from across the country to pursue critical research:

- **The Continuous Electron Beam Accelerator Facility (CEBAF)** in Virginia, where more than 1,300 scientists study the fundamental structure of protons, neutrons, and nuclei and the forces that bind them.
- **The Relativistic Heavy Ion Collider (RHIC)** in New York, where over 1,200 researchers recreate the conditions of the very early universe to study a new state of matter, the hottest matter ever produced on Earth, and explore its fundamental constituents and forces.
- **The Facility for Rare Isotope Beams (FRIB)** under construction in Michigan, which will provide intense beams of rare isotopes to help over 1,300 scientists better understand the characteristics of atomic nuclei, their origin in the cosmos, and their potential applications.

The U.S. nuclear physics research community is grateful to Congress for its strong, continued support for this critical, yet sometimes underappreciated discipline.

Our Ask:

- 1) **Oppose cuts to the U.S. Department of Energy Office of Science budget.**
- 2) **Support “modest growth” funding for the DOE Nuclear Physics program consistent with the recommendations of the 2015 DOE/NSF Nuclear Science Advisory Committee Long Range Plan.**

	FY 16 Enacted	FY 17 request	FY 17 Enacted	FY18 “Skinny Budget” Request	FY 18 NSAC Modest growth scenario*
Department of Energy (DOE)	\$29.6 B	\$32.5 B	\$30.8 B	\$28.0	N/A
Office of Science (SC)	\$5.34 B	\$5.67 B	\$5.39 B	~ \$4.44 B	N/A
Nuclear Physics	\$617.1M	\$635.7M	\$622M	?	\$646M

*(FY 2017 enacted +CPI+1.6%)
